

Medical Physics Seminar

Monday, April 16, 2018

1325 HSLC ~ 4:00 P.M.

Rachel McKinsey, PhD

UW-Madison Medical Physics Alum
Clinical Medical Physicist at e+CancerCare
Lafayette, Louisiana

The Evolving Role of the Clinical Medical Physicist in Radiation Therapy

Medical physics can be described as the application of physics to effectively enhance healthcare and medicine. Medical physicists are concerned with clinical service and consultation, research and development, and teaching. In the clinical setting, the responsibilities of the medical physicist have varied over time in radiation therapy departments. Clinical medical physicists use Task Groups as a common resource of reference to aid them in performing daily, weekly, monthly, and annual responsibilities. During this talk, the clinical role of the medical physicist at e+ Cancer Care will be discussed as well as a review of typical and unique clinical cases of interest.

1325 Health Sciences Learning Center (HSLC) 4:00 - 5:00 P.M.
